LA UNI × FEME / LEARNING NOTEBOOKS

The project and the partnership

Purpose, institutional participants and shared decisions.

Purpose

Women of Sun and Earth connects La Uni, FeME and a Collective in a community lab for learning and decisions about energy. The collaboration is supported by the Represent and Innovate Seed Fund. Its purpose is to connect energy services, autonomy and care, with the community participating in decisions.

Who contributes what

The Collective contributes everyday knowledge, needs and criteria for use. La Uni Environmental Engineering provides academic support and student participation. Luz Dehni Acosta Moyado coordinates the academic work; Eduardo Walerstein Frenkel participates as Rector. FeME contributes the inclusive engineering framework. Rafiqui donated eight 300 W panels. Design and installation require review by qualified personnel.

Technical and exchange partnerships

Mujeres de la Tierra, Mujeres de la Periferia: community authorship and decisions. Enrique Abdala Mojica Castillo, EMC Ingeniería: technical collaboration. Agua Clara Ciudadanos Por Bacalar, A.C., with ICM and IDEA: exchange networks. Agua Clara enabled a representative of the Collective to take part for three days to explore other solar energy systems and projects.

What makes the experience possible

Listen before acquiring equipment; agree use of the space; address support needs with competent partners; compare options and learn to care for them. Continuity is built through agreements and networks, including beyond students' graduation.
