La Uni and Environmental Engineering

The university, coordination and the role of the student team.

Universidades La Uni

Centro de Estudios Avanzados para la Investigación y el Conocimiento Aplicado. A higher education institution connecting education, research and applying knowledge to social and environmental challenges.

The programme leading the work

Environmental Engineering, with a focus on Sustainability, carries out the project at La Uni. Women students and the wider student team participate in listening to needs, workshops, designing alternatives and documentation, with academic guidance and community dialogue.

Coordination and Rector

Dr Luz Dehni Acosta Moyado: academic coordination. Eduardo Walerstein Frenkel: Rector of Universidades La Uni. Individual student identities are protected in this publication.

Learning and continuity

The experience connects classroom learning, fieldwork and collaboration. Handover between students, graduates, academics and partners should be agreed before each period ends, specifying what support can continue and who will respond.

La Uni
